

Few words about me, so you are able to help me: After completing my PhD (around March 2022), I am planning to move to Athens due to personal reasons and my aim is to look for a job as a Chemical/Process Engineer. Other relevant roles that I am interested in are Project Engineer and Cost Control Engineer. These positions are limited and I am very open to trying something new. My main motivation is curiosity and I love solving problems. Ph.D. study seemed a fantastic opportunity to develop inductive reasoning since my inherent way of thinking is top-down. However, I realize that I am not a good fit for academia since I prefer a more structured working environment with clear rules and hierarchy. My long-term goal is entrepreneurship (hopefully with a social impact) but I would like to work on a large-scale company first.
